

Lash Curl and Extension Size Chart

Use this sheet to compare relative curl profiles and prepare a factory brief. Curl letters are not universal mould standards; approve the intended supplier sample before bulk production.

Diameter reference

Diameter	Catalogue context
0.03–0.07 mm	Fine fiber and volume-oriented lines
0.10–0.12 mm	Selected classic or specialty options
0.15 mm	Common classic reference
0.18–0.25 mm	More substantial selected ranges

Length reference

Tray	Write in the brief
Single length	One length plus row count
Mixed length	Every length and its row allocation
Mixed curl	Every curl, length and allocation
Current records	6–25 mm on relevant product lines

Specification formula

Construction + fiber/finish sample + diameter + curl + length sequence + rows + tray/strip + packaging + quantity + approval.

Approval rule: compare curls using the same supplier, fiber, diameter and length. MOQ, available combinations and production timing are confirmed after the complete brief.
